

Dear Clients,

DataHive has received several inquiries regarding the Internet Service Providers (ISPs) currently available directly from the data centre. We are delighted to do so.

DataHive is the only data centre between Toronto and Vancouver offering in-house access to thirty-six ISPs from one location. The scope of connectivity available to you includes rural, provincial, national, international and global locations. Accordingly, a list of these ISP logos are shown below. Should you be interested in contacting any of them, go to our website: <https://www.datahive.ca/isp-partners/index.html>, then click on your chosen logo for contact information.

Please let us know should you require more information.
